

GRIP

SHS / SHS Pro Connector

The SHS Connector – the original with the blue hand lever: Intuitive, precise, and durable. It convinces with integrated pneumatic feed-throughs.

The new SHS Pro Connector is a further development with additional pneumatic feed-throughs for even greater performance and flexibility.

SHW Connector

The SHW Connector combines user-friendly handling, durability, precision and safety – ideal for modern automation applications.

MGW Connector

The MGW Connector is a universal tool changer with a focus on quality, durability, precision and tool-free operation

SWS Connector

The SWS Connector is an extremely durable tool changer for high load and high torque applications.

Base Connector

The Base Connector allows for quick and easy removal of the entire robot arm. The entire robot can be repositioned within seconds - without the need for re-referencing.

Auto Connector

The Auto Connector is a fully automatic tool changer that requires no external energy for the locking and unlocking process - the locking and unlocking mechanism is activated through the robot's own movement.

Electric Grippers

The GRIPKIT EASY is a robust servo gripper offering precise performance for a wide range of applications. It features plug & play integration without complex programming - fast, efficient, and reliable.

Pneumatic Grippers

GRIP's pneumatic parallel and angular grippers impress with their extremely rugged and compact design, and are available in multiple sizes.

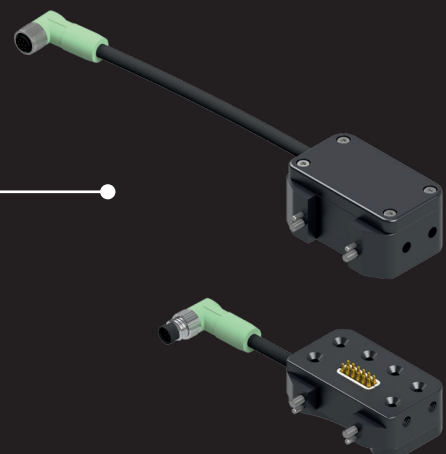

Internal Grippers

GRIP's internal grippers securely and gently hold workpieces. This is made possible through the use of an inflatable silicone membrane that adheres to internal bore surfaces through friction.

Accessories

Standardized products for routing compressed air, electrical signals, and other automation functions.
